Vertical Stirred Mill order awarded to STM

Baden, Switzerland, 17th of May 2022 – Swiss Tower Mills Minerals AG (STM) has been awarded an order for the delivery of one energy efficient VRM3000F-700 grinding mill for Nui Phao Mining Tungsten expansion project in Vietnam. The project was awarded in first quarter 2022.

STM's scope includes the design, manufacturing and delivery of one Vertical Re grind Mill (VRM), with a 700 kW drive package and a user-friendly control system. The regrind circuit will process up to 64 tonnes of flotation concentrate per hour. The compact footprint of the VRM mill makes it possible to install it in a limited available area in the existing concentrator building. Deliveries will take place during fourth quarter 2022.

Swiss Tower Mills Minerals AG (www.stmminerals.com) is an innovative company for grinding in the mineral industry. – *The Art of Grinding*
